

Titanium | Titanium Alloys

Your partner for titanium

HSM® supplies you with titanium and titanium alloys in your required delivery form and specific dimension. Thanks to our great connections to mills in Europe, Asia and America we can procure your demands in titanium quickly. Individual customer-specific requirements? No problem, we will take care of them.

Import

Many purchasing managers recoil from procurement of titanium due to the hidden difficulties and risks of importation. If you are not familiar with importation from countries – especially in the Far East, you can leave this process with the experts from HSM®.

- Worldwide network and long-lasting experience
- Collaboration with certified mills
- If required: 3.2 test before transport from institutes like SGS, TÜV, GL
- Frame orders – supply security thanks to stocking of tested material
- Depending on customer requirements – importation of EU-material or from Asia or America

Logistic organisation

Importation is always connected to higher expenses in logistics. HSM®'s “all-around-carefree” packages gives you the advantages of not having to handle these tasks. You order – we take care of everything else until the material is delivered to you.

Depending on urgency we chose the best way of transportation:

- Sea freight
- Air freight
- Lorry
- Train

Delivery program

Which delivery forms and dimensions can be ordered?

You don't find a list of specific delivery forms or dimensions as we don't know any limits.

- Plates
- Sheets
- Pipes
- Forgings
- Profiles and many other

We deliver titanium in the form you require. Special dimensions and cuts can also be ordered at HSM®.

Check the availability of your grade with our material finder and easily send us your inquiry of your delivery form and dimensions via online formular. We will send you our detailed offer shortly.
